

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A light-emitting device comprising:
 - a cathode;
 - an anode that constitutes a pair together with the cathode;
 - a hole injecting layer in contact with the anode and disposed between the anode and the cathode; and
 - a luminescent layer that is disposed between the hole injecting layer and the cathode and emits light when an electric field is applied,
 - wherein the hole injecting layer comprises an electron-accepting organic compound and a conjugate polymer and
 - wherein the conjugate polymer has a repeating unit expressed by the formula (1)[[.]]

~~(In the formula, wherein R¹ and R² are the same or different and selected from a dialkylamino group, a trialkylsilyl group, and an aromatic substitution group having a substitution group selected from a thioalkyl group, a dialkylamino group, and a trialkylsilyl group.~~

2. (Previously Presented) The light-emitting device according to claim 1,
wherein the light-emitting element includes a hole transporting layer disposed so as to come into contact with the hole injecting layer.
3. (Currently Amended) The light-emitting device according to claim 1,
wherein the light-emitting element includes a hole transporting layer disposed so as to come into contact with the hole injecting layer and [[a]] the luminescent layer disposed so as to come into contact with the hole transporting layer.
4. (Previously Presented) The light-emitting device according to claim 1,

wherein the light-emitting element includes a hole transporting layer disposed so as to come into contact with the hole injecting layer, the luminescent layer disposed so as to come into contact with the hole transporting layer, and an electron transporting layer disposed so as to come into contact with the luminescent layer.

5. (Previously Presented) The light-emitting device according to claim 1,

wherein the light-emitting element includes a hole transporting layer disposed so as to come into contact with the hole injecting layer, the luminescent layer disposed so as to come into contact with the hole transporting layer, an electron transporting layer disposed so as to come into contact with the luminescent layer, and an electron injecting layer disposed so as to come into contact with the electron transporting layer.

6. (Canceled)

7. (Currently Amended) The light-emitting device according to claim 1,

wherein the electron-accepting organic compound is at least one kind of compounds expressed by the formulas (2) through (9)[[.]]

8. (Previously Presented) The light-emitting device according to claim 2,
wherein a blocking material having an energy difference between a highest occupied molecular orbit and a lowest unoccupied molecular orbit larger than that of a hole transporting material contained in the hole transporting layer is contained in a region between the hole transporting layer and the cathode.

9. (Previously Presented) The light-emitting device according to claim 3,
wherein a blocking material having an energy difference between a highest occupied molecular orbit and a lowest unoccupied molecular orbit larger than that of a hole transporting material contained in the hole transporting layer is contained in a region between the hole transporting layer and the cathode.

10. (Previously Presented) The light-emitting device according to claim 4,
wherein a blocking material having an energy difference between a highest occupied molecular orbit and a lowest vacant molecular orbit larger than that of a hole transporting material contained in the hole transporting layer is contained in a region between the hole transporting layer and the cathode.

11. (Previously Presented) The light-emitting device according to claim 5,
wherein a blocking material having an energy difference between a highest occupied molecular orbit and a lowest vacant molecular orbit larger than that of a hole transporting

material contained in the hole transporting layer is contained in a region between the hole transporting layer and the cathode.

12. (Previously Presented) The light-emitting device according to claim 1,
wherein the light-emitting element includes a compound that exhibits emission from a triplet-excitation state.

13. (Previously Presented) The light-emitting device according to claim 1,
wherein the conjugate polymer is electrochemically oxidized.

14. (Previously Presented) The light-emitting device according to claim 1,
wherein the conjugate polymer is formed in film owing to electric field
polymerization of corresponding monomers.

15. (Previously Presented) An electric appliance comprising a light-emitting device according to claim 1.

16.-37. (Canceled)
